

Iddenshall Grange Solar Park Project

Development of a 17.57 MW solar park on land South of Iddenshall Grange, High Street, Clotton, CW6 0EQ.

Anesco Limited is proposing to develop a 17.57 MW solar park on land South of Iddenshall Grange, High Street, Clotton, CW6 0EQ. The application area will be approximately 37 hectares.

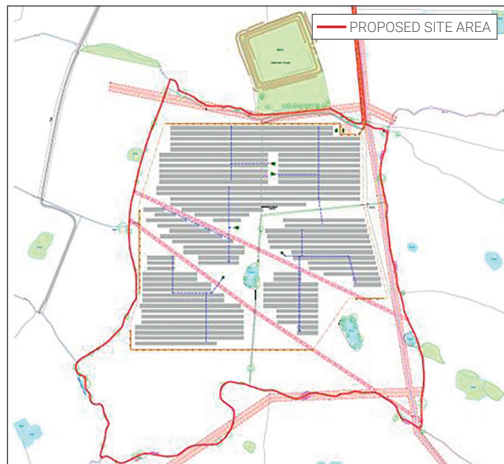

The UK government is committed to ending its contribution to global warming by 2050, and more recently has announced to cut carbon emissions by 78% by 2035, 15 years earlier. The Iddenshall Grange solar park project will support these targets and benefit the local community now, and for generations to come.

Benefits of the Iddenshall Grange Solar Park Project

- Supports biodiversity
- Saving 4,000 tonnes of CO₂ emissions per annum
- Powering 4,500 average UK homes

Proposed site

The land at Iddenshall Grange is suitable for a solar farm because it is close to a viable grid connection and is not at risk of flooding. It also has suitable topography and ground composition and is not within an Area Outstanding Natural Beauty (AONB), Greenbelt, National Park or other designated landscape area, it is also set away from heritage designations and features.

The solar farm will be set back from residential properties, limiting views of the development within the local area. Furthermore, it is anticipated that planting and hedgerow re-enforcement will be put in place.

Anesco is currently awaiting a response to an Environmental Impact Assessment (EIA) screening request from Cheshire West and Chester Council, sent on the 29th January 2021 for the proposal (ref: 21/00514/SCR).

We are now seeking views from residents on the proposal

Due to the restrictions from the Covid-19 pandemic, we are unable to host a public consultation event in person, we do however encourage feedback which can be done by visiting www.anesco.co.uk/iddenshall-grange or by email iddenshall-grange@anesco.co.uk. Closing date for feedback is 14th May 2021.

Have your say

More information and feedback on the development can be found at:
